

ISAAC ODEIMOR / FREELANCE AUTOMATION DEVELOPER / GLASGOW, UK

Isaac Odeimor

I'm a freelance developer who builds custom tools that take repetitive work off small business owners: follow-ups, orders, reports and paperwork. I'm self-taught, learned by shipping real client work, and I'm studying Computer Science alongside it. I work remotely with clients in the US and UK.

CONTACT ME

PROFILE

I start with the one task that eats a business owner's week, not with a tool I want to use. I reply with questions or a plain-English plan, then build something simple your team can use without a manual. On the technical side I work across React and TypeScript, Node.js and cloud infrastructure (AWS, Azure), and I build my own tools in my spare time, including custom database and AI agent projects.

WHAT I BUILD

- Follow-ups and renewal reminders
- Quote chasing and document collection
- Order entry and weekly reports
- Tools that answer repeat customer questions
- Stack: TypeScript, JavaScript, React, Node.js, REST APIs, AWS, Azure, AI agents

WHAT I'M OPEN TO

- Freelance automation and custom-tool projects
- Small businesses in the US and UK
- Internships and full-time engineering roles

CLIENT WORK

DailyNaira

Built the landing page, the dashboard flow and the path from first visit to first task for a platform where people earn by completing marketing tasks for brands.

DailyBoost

Built a landing page for the DailyBoost brand so a visitor has one clear action on phone and desktop. The project is finished; the client's domain has since lapsed.

Cloutingo

Built the product interface, including the sign-in and account screens, for a workflow product used by creators and brands running social campaigns.

OWN PROJECTS

AgentDB

Built a lightweight embedded document database from scratch with encryption, compression, write-ahead logging, and a clean developer-facing API.

Engram / Memory Systems Work

Built memory tooling for AI agent workflows and explored how state, recall and persistence should work in practical AI systems.

APIForge, Envault, CrawlX

Built supporting developer tools spanning API workflows, secrets management, and search/crawling systems as part of ongoing systems-focused work.

EDUCATION

B.Sc. Computer Science — Federal University of Lafia

Studying alongside freelance client work.

WORKING STYLE

- Starts from your problem, not a tool
- Tells you when something is not worth automating
- Owns the build end to end, from screens to hosting
